

ABSTRACT

Disclosed are a sliding opening and closing device and a portable terminal
5 having the same. According to the first embodiment of the present invention, a slide
plate is linked to a main plate to be slidable in one direction. Also, the main plate
supports an elastic part so as to generate an elasticity power in one direction. A power
transformation member receives the elasticity power of the elastic member, and
transmits the elasticity power to the slide plate in the direction of the opening or the
10 closing according to the position of the slide plate.
